

Establishing an Industry-Academia Cooperation Platform through ILO

Enterprises that become members of the Industry Liaison Office (ILO), National Taiwan University (NTU) can establish strong alliance partnerships with NTU and develop closer cooperation relationships. Through working with ILO, singular industry-academia cooperation can transform into a cross-sector, cross-industry, cross-department, diverse, and integrated industry-academia cooperation model.

Resource Integration and Cross Sector Innovation

ILO serves as a valuable contact service window for enterprises, offering support for integration, technology and knowledge R&D, and human resources. ILO also serve as the main contact point for NTU and enterprises, integrating resources provided by the government and enterprises to support university personnel and teams.

Promoting an Industry-Academia Ecosystem for Economic Transformation

Participating in ILO provides enterprises with access to NTU's research resources, which can serve as momentum for growth and innovation. Additionally, the financial resources that enterprises offer act as a driving force for the enhancement of NTU's research department. Through mutual resource sharing, NTU and its partners strive to establish a positive cycle and jointly promote an industry-academia ecosystem.
